STAND COUNTS FOR DEER

Stand counts will be utilized for harvest recommendations on ranches that standard census techniques cannot be used such as on smaller acreages and/or ranches with extremely dense vegetation.

Guidelines for Stand Count

- 1. One stand per 100 acres of deer habitat with counts conducted in at least 2 stands at the same time.
- 2. A minimum of five sittings (observation recording periods) per stand.
- 3. A minimum 2-hour observation recording period per stand sitting (rec. first or last hours of daylight).
- 4. All stands in an area should have observers at the same time (simultaneous effort) for each sitting.
- 5. Be careful not to record the same deer twice during the same sitting.
- 6. Complete stand sittings between August 1 September 10.
